Recognize

Security | SAML SSO Authentication

Overview

SAML Authentication allows organizations to achieve Single Sign On(SSO) to Recognize via their existing identity provider(Idp).

Specification

Recognize SAML SSO supports SAML version 2.0

Requirements

To implement Recognize's SAML SSO, organizations must enter in their SAML Idp settings into the Recognize Company Admin. Typically, SAML implementations require a corresponding set of settings to be entered on the Idp side as well. See Settings.

User flow

Recognize supports several authentication mechanisms: password, OAuth, and SAML. An organization may use any combination of these methods. As a result, when SAML SSO is enabled, each organization will have a special login url where users can select their preferred authentication mechanism. After selecting "Sign in with SSO", a user will be brought to their Idp page to authenticate. If they are already logged in, the user will be immediately redirected and logged into Recognize with no further step necessary. Organizations can hyperlink to the direct SSO url for immediate login from their intranet.

Example authentication selection url:
> https://recognizeapp.com/example.com/idp

Example direct SSO url:
> https://recognizeapp.com/example.com/saml/sso
